➢Customized reports.

Here is how we will change the education to smart education

Student and campus management
With AHALTS, Student and campus management becomes an easy, secure and effortless task.
At present, there are more and more security risks around us, especially the safety of school students all of us are concerned. AHALTS is the most advanced technology in the world on date for students and school's security.
It assures parents that their child is in safe school management.
AHALTS ensures students arrive in the school within the specified time
AHALTS can effectively prevent foreign unidentified tasks into the school, to protect students' lives and property. Similarly, our products can be used in test verification, to avoid candidates to pretend to test others.

School Bus Monitoring
AHALTS provides a seamless school bus and student travel monitoring solution
The school Bus first step for security requires that the Bus team is authenticated and authorized as the driver and his team take over the bus for duty they use our mobile app which marks their attendance and request the supervisor for approval as this is approved the device releases the engine start system the bus is tracked real time and as it nears the pickup points it send a notification to the students parent app with estimated time of arrival with information on the bus team the parents can track the vehicle real time on their app.
As the student enters the Bus the face recognition device or mobile app captures the student and notifies the parent with the student photo.in case of any road emergency like accident of student requiring any medical assistance the attendant can simply scan the students face and get his medical information that can be updated by parents . the supervisor can instantly inform the designated people for this
As the bus enters the premises the access control gate can be operated by the Driver with his face scan and our number plate detection system.

Here is how we will change the education to smart education

Examination System:
AHALTS IM solution ensures that the person registered for the exam is instantly authenticated with this face recognition that is 99 % accurate (Identical twins have a similarity of 96%) this eliminates Proxy candidate similarly the degrees are also validated with AHALTS
AHALTS time and attendance reports are all real time available to the management to know the real time strength of students in class rooms , examination rooms etc
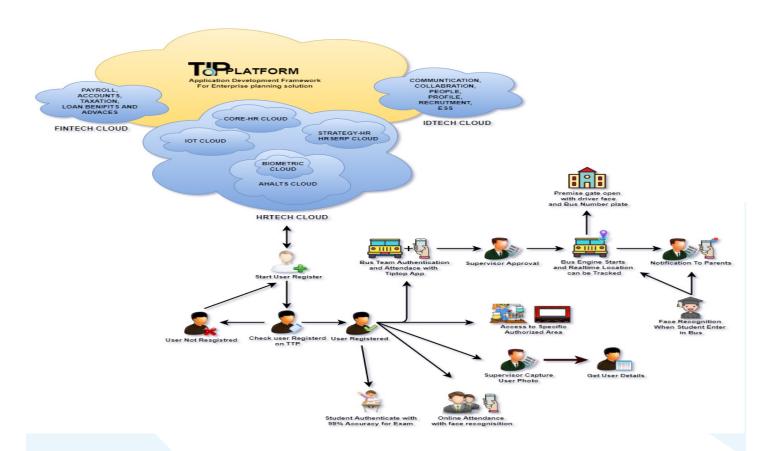

Online Classes :
AHALTS Anywhere multiple device multi location service using Face id can be used by remote users to mark their presence and this can activate their access to the online class and ensures that the students are present and their attendance is automatically marked
The KMS and training module with zoom integration automates the entire class content and teaching management (a separate module for this is available)

Touchless Covid complaint Access Control System
A whole set of access control system includes School / University gates access control, card reader, electronic control lock, door switch, door button and emergency break glass button. It is mainly installed at the School entrance to prevent unrelated person from entering or students going outside , office area through set different parameters and permissions to improve the security.

Here is how we will change the education to smart education

Campus Secure System:
For specific areas like Auditorium , Labs , lecture rooms etc only registered users can get in with AHALTS access control , the system ensures that the people are authorized for this area .
Reverse profile scan is a great feature for people safety as in case of accident or stray student suspected not to be in a area the supervisor can just capture the photo of the person and get entire profile like his designated location , health records etc any information can be programmed to be shown with this profile
